Our focus is on creating
futureproof solutions

Danish quality and design since 1921

Technical cabinets /

FUTUREPROOF INFRASTRUCTURE SOLUTIONS

Priess A/S was established 100 years ago and for the last sixty years, it has been delivering technical cabins for infrastructure on the Danish market. We have evolved in tandem with the market, and today we can deliver an ever-growing range of complete solutions. The company is 100% Danish owned and takes a hands-on approach to all cabinets, from start to finish. From the rolling of coils to the delivery and assembly of our cabinets on site. All work is performed in Denmark, contributing towards securing Danish jobs, solid quality and the fast delivery of customised solutions. All of which enhances the overall quality of the work and service that Priess A/S delivers.

Priess A/S supplies customised solutions for infrastructure. Naturally, these are designed and developed in close collaboration with the customer. The customer sets a number of requirements which we strive to meet. These can be anything from the size of the cabinet to the functions and tasks it will be expected to perform. We place focus on developing futureproof solutions.

- **Combination of electricity supply and pump controls**
- **Complete delivery (Plug & Play)**
- **Customised dimensions**

HERE AT PRIESS A/S, WE ARE AWARE OF HOW IMPORTANT IT IS TO KEEP UP TO DATE WITH ALL THE LATEST TRENDS AND DEVELOPMENTS, BOTH IN DENMARK AND OVERSEAS. WE STRIVE TO ALWAYS KEEP ABREAST OF THE LATEST DEVELOPMENTS AND WE HAVE GROWN AND DEVELOPED OVER THE YEARS IN COLLABORATION WITH OUR CUSTOMERS. CABINETS PRODUCED BY PRIESS A/S CAN FULFIL A WIDE RANGE OF CUSTOMER REQUIREMENTS, WHETHER IT BE FOR PRESSURE AND TEMPERATURE MONITORING IN THE SUPPLY NETWORK, CONTROLS, COILS, FREQUENCY CONVERTERS OR SOMETHING ELSE, PRIESS A/S CAN WORK WITH THE CUSTOMER TO FIND THE PERFECT SOLUTION.

PRIESS CABINETS – A VALUE-GENERATING SOLUTION

All materials are stored appropriately – and this further ensures the quality of the finished product.

At this stage, the cabinet is formed, welded and then put together at our specially developed factory. The cabinet then goes to our painting booth where your preferred colour and corrosion class are applied. Next, the cabinet proceeds to final assembly and your selected parts are installed.

1

QUOTING PHASE

Design and planning in conjunction with customer. Requirements clarified and location determined.

2

CABINET PRODUCTION

3

Generally used within:

- Wastewater
- Drinking water
- Energy supply
- Heating
- Digital infrastructure

DELIVERY TO THE CUSTOMER

The finished cabinet is packed up and put on a truck for delivery. The cabinet is delivered to the customer who then takes over responsibility for its installation (unless otherwise agreed)

AREAS OF APPLICATION

ADVANTAGES

1. Component combinations

Cabinets from Priess A/S make it possible to place controls and electrics in the same cabinet.

2. Seawater-resistant aluminum

We can provide cabinets clad in seawater-resistant aluminum for use in special environments such as harbour areas which are exposed to a lot of saltwater spray.

3. Cabinets with a streamlined design

No matter whether they are for the city or the country, our cabinets can be made to blend in with their surroundings. It's your choice whether you want something eye-catching or inconspicuous.

4. Danish quality

Quality is the best form of environmental protection!

That is why our cabinets are virtually maintenance-free and have a long lifespan.

5. Components of the highest quality

Priess A/S only uses recognised suppliers of components and materials of the highest quality in its products – and this boosts overall quality considerably.

6. Flexible extension options

Our cabinets can easily be opened up and extended vertically.

WHY CHOOSE PRIESS?

- Component combinations
- Seawater-resistant aluminum
- Streamlined design
- Danish quality
- Components of the highest quality
- Flexible extension options
- Lightweight
- Weather resistance
