# Unique water solutions

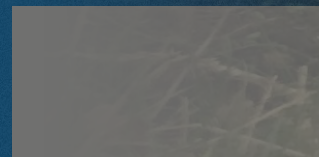

Priess A/S provides customised solutions for the drinking water and wastewater segment.

When it comes to customised solutions, we naturally work in close collaboration with the customer. The customer sets a number of requirements that we make sure to fulfill. This can be anything from the size of the construction to the functions and tasks it will perform.

We make sure to create future-proof solutions.

- Product development
- Custom solutions
- Close dialogue with product managers and designers
- Expert knowledge in the area

**We put our years of knowledge and knowhow at the disposal of our customers – together we find the right, tailor-made solution.**

# Advantages

## 1 Knowhow

For more than 60 years, we have striven to continually update and improve the cabin concept that we use today. This makes us a valuable partner.

## 2 Components of the highest quality

Priess A/S only uses recognised suppliers of components and materials that deliver the highest quality for installation – and this significantly improves quality.

## 3 Custom solutions

Whether your request concerns drinking water or wastewater, we can customise the housing and its components in accordance with your individual needs and wishes.

## 4 Danish quality solution

Quality is the best environmental protection! That's why our cabins are virtually maintenance-free and have a long lifespan.

## 5 Full service from design to on-site delivery

We are involved in the whole process, from the initial design of the stations right through to final delivery.

## 6 Flexible construction

With a construction built over a lightweight frame, the roof and the housing can easily be removed. So if you need to add components after delivery and installation on your foundation, this can be done using just a small number of tools.

# USP

- Easy to maintain
- Flexible design/Materials and colours can be adapted to the surroundings
- Strong and thermally insulating walls
- Noise insulation
- Secure against vandalism and burglary
- Standard delivery on concrete base (or alternatively on a steel frame)
- Prefabricated
- Option to equip with crane for lifting pumps/pipes
- Weatherproof
- Light weight
- Long lifetime
- Individual placement of doors with a door reveal width of 600–2800 mm.
