

Water and Industry / Component Cabinet

## Raised plinth

Copyright © 2025 | June

### Description

This raised plinth is designed to increase the height of an existing plinth by 356 mm.

It allows for the cabinet to be adapted to changing conditions, such as rising water levels or the need for improved protection against moisture and flooding.

The elevation provides a stable and durable solution, suitable for both new and/or renovation projects where increased ground clearance is required.
